These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and lymphoma), while modulators of ALK-7 (which is a type I receptor serine/threonine kinase) are used to promote neuronal survival, particularly for treating Alzheimer's, Parkinson's or Huntington's diseases. Nucleic acid fragments of the polymucleotides encoding the proteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNA; to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

The present invention describes isolated, enriched or purified nucleic colds encoding PTP04, SAD, PTP05, PTP05, ALP and ALK-7 proteins. The CC acids encoding PTP04, SAD, PTP05, PTP05. The above proteins. The CALK-7, are protein tyrosine phosphatases (PTP05) and are used to identify CC substances that modulate their activity (i.e. agonists and antagonists, CC including NBP) in vivo or in vitro. These substances are used to treat or CC prevent diseases associated with abnormal signal transduction pathways CC that involve the proteins, particularly cancer (e.g. leukaemia and CC lymphoma), while modulators of ALK-7 (which is a type I receptor CC serine/threonine kinase) are used to promote neuronal survival, CC particularly for treating Alzheimer's, Parkinson's or Huntington's CC diseases. Nucleic acid fragments of the polymucleotides encoding the CC proteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNA; to generate transgenic animals and in gene corrections.
                                                                                                                                                                            á

                                                                                                                                                                        CC The present invention describes isolated, enriched or purified nucleic cacids encoding PTP04, SAD, PTP05, PTP104, ALP and ALK-7 proteins. The present sequence represents mouse PTP05. The above proteins, other than CC ALK-7, are protein tyrosine phosphatases (PTPs) and are used to identify substances that modulate their activity (i.e. agonists and antagonists, CC including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and CC lymphoma), while codulators of ALK-7 (which is a type I receptor CC serine/threonine kinase) are used to promote neuronal survival, CC particularly for treating Alzheimer's, Parkinson's or Huntington's CC diseases. Nucleic acid fragments of the polynucleotides encoding the groteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNA; to generate transgenic animals and in gene transpy (optionally after mutation). Ab are used to determine the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8

                                                                                                                                                                                                                                                                                                                      Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               such as Down's syndrome, cerebral palsy, periodic paralysis, mental disorders including mood, anxiety, and schizophrenic disorders, seasonal affective disorder such as akathesia, ammesia, catationia, dyskinesia; developmental disorders include e.g. renal tubular acidosis, Ducheme and Becker muscular dystrophy, gonadal dysgenesis, hypothyroidism; cell proliferative disorders include e.g. actinic keratosis, arteriosclerosis, currinosis, hepatitis, psoriasis and cancer cincluding adenocarcinoma, leukaemia. The polypeptide and polynucleotide are further useful for analysing proteome of a tissue or a cell type, for screening an agonist/antagonist, a compound that specifically binds to it or its modulator. The polynucleotide is useful for creating knockin humanised animals (pigs) or transgenic animals (mice or rate) to model type, which represents the global pattern of gene expression by a concern.
                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is human protein phosphatase (PP)-4. Pp polymucleotide and polypoptide are useful in the diagnosis, treatment prevention of immune system disorders, neurological disorders, developmental disorders and cell proliferative disorders. Examples of immune system disorders and cell proliferative disorders. Examples of immune system disorders include acquired immune deficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Page 105-106; 116pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and polypeptide (II) C sequences. (I) is useful as hybridisation probes, polymerase chain CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping, CC and in recombinant production of (II). The polynucleotides are also used Ci in diagnostics as expressed sequence tags for identifying expressed equence (II) is useful in gene therapy techniques to restore normal C constitution of (II) or to treat disease states involving (II). (II) is C useful for generating antibodies against it, detecting or quantitating a CC polypeptide in tissue, as molecular weight markers and as a food CC supplement. (II) and its binding partners are useful in medical imaging C of sites expressing (II). (I) and (II) are useful for treating disorders (involving aberrant protein expression or biological activity. The CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and C amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic c patent did not appear in the printed specification, but was obtained in CC electronic format directly from MIPO at semino, in rimh/published not seminoces.

                                                                                                                                                                                                                                                                                                                    문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC such as obesity, diabetes, a central nervous system (CNS) disorder, CC chronic obstructive pulmonary disease, cardiovascular disorder or cancer. The invention is useful for treating a human tyrosine phosphatase convention is useful for treating the above mentioned disorders. The invention is useful for treating the above mentioned disorders, where the convention is selected from Parkinson's disease, multiple sclerosis, conventions, alzheimer's disease, and Huntington's disease, and the cardiovascular disorder is selected from congestive heart failure and convocatial infarction. The molecules of the invention are useful in congestive assays for detecting diseases and abnormalities or susceptibility to disease and abnormalities related to the presence of cutations in the polypucleotide coding the polypeptide of the invention. The present amino acid sequence represents the human tyrosine phosphatase construction. This sequence is encoded by the human construction.

autoimmune disease. New nucleic acids encoding cancer associated phosphatases, usergets for screening pharmaceutical agents that inhibit the or for diagnosing and treating cancer, inflammation useful as ę O.

Claim 1; SEQ ID NO 10; 63pp; English

CC The present invention describes an isolated cancer associated phosphatase CC nucleic acid. Also described: (1) a method of screening for biologically CC active agents that modulate a cancer associated phosphatase function; (2) CC a method for the diagnosis of cancer; (3) a method for inhibiting the CC growth of a cancer cell; (4) methods of screening for targets of a cancer CC associated phosphatase, where the targets are associated with signal CC tumour; (6) a composition for the treatment of a tumour; (6) a composition for the treatment of a tumour comprising a CC pharmaceutical carrier and (C); (7) methods for treating a tumour; and CC pharmaceutical carrier and (C); (7) methods for treating a tumour; and CC phosphatase of the present invention has cytostatic, immunosuppressive, CC antipsoriatic, neuroprotective, antitheumatic, antiarthritic, neuroprotective, antitheumatic, antiarthritic, considered continuous in patients or diagnosing and treating cancer, e.g. CC phosphatases and nucleic acids encoding the proteins are useful for CC usualising tumours in patients or diagnosing and treating cancer, e.g. concleic acids may also be used for treating hyperproliferative diseases, condometriosis or angiogenesis, determining the effectiveness of drugs, condometriosis or angiogenesis, determining the effectiveness of drugs, condometriosis or angiogenesis, or as targets for screening pharmaceutical

                                                                                                                                                                                                       The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ghosh
Ma Y,
                                                                                                                                                                               Sequence 409 AA;
                                                                                                                                                                                                                                                                                                                                                                       New polynucleotides, useful for expressing recombinant proteins analysis, characterization or therapeutic use, or as markers for in which the corresponding protein is preferentially expressed.

```
The invention relates to an isolated polypeptide, which is a human kinase CC and phosphatase (RPP). KPP agonists and antagonists are useful for CC diagnosing, treating or preventing disorders associated with aberrant CC expression of KPP, particularly cell proliferative disorders (e.g. CC arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal concturnal haemoglobinuria, polycythaemia vera, psociasis, primary CC thromobocytopaenia or cancer), developmental disorders (e.g. renal tubular acidosis, anaemia or mental retardation), neurological disorders (e.g. Alabemer's disease Parkinson's disease or epilepsy), autoimmune/CC allergies, asthma, autoimmune thyroiditis, contact dermatitis, Crohn's CC disease, diabetes mellitus, glomerulonephritis, Goodpasture's syndrome, CC disease, diabetes mellitus, glomerulonephritis, Goodpasture's syndrome, CC gout, Grave's disease, Josephrickis, osteophritis, osteophritis, riritable bowel syndrome, CC syndrome, rheumatoid arthritis, Sjogren's syndrome, uveitis), or viral, CC bacterial, fungal, parasitic, procozoan or helminthic infections. The KPP CC is useful in assessing the effects of exogenous compounds on the CC expression of nucleic acids and knases and phosphatases. KPP gene is useful in gene therapy and for creating transgenic animals to model human CC disease. The present sequence is human KPP protein
                                                                                                                                                                                                                                                                                                                                                     Best Loc

Senoo C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The specification describes human protein kinase/protein phosphatases. It is expected that the protein kinase/protein phosphatase gene participates in signal transduction in cells. The protein kinase/protein phosphatase polypeptides and polymucleotides are useful for developing diagnostics and treatment agents for human and animal diseases. The protein kinase/protein phosphatase polypeptides are useful as target molecules in designing novel drugs. The protein kinase/protein phosphatase polypeptides are source of probes and primers, which may be used to isolate homologous sequences. The present sequence represents a human protein, which is used in the course of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         17-FEB-2000; 2000US-0183322P-02-MAY-2000; 2000UP-00183767.09-JUN-2000; 2000UP-00241899.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The polypeptides are expected to participate in signal transduction in cells. The kinase phosphatases are connected with intracellular signalling pathways, Antisense oligonucleotides and compounds identific by screening (agonists or antagonists) can be used to treat human or animal disorders associated with the expression or function of the protein. In addition, the polypeptides may be used as target molecules fir drug development. The present sequence represents a polypeptide, us in the course of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11-JAN-2000;

                                           adipocyte cells, given in the specification. The proteins are identified by selecting a bait protein from a known adipocyte marker and then complex between two interacting proteins are identified by selecting a yeast 2-hybrid selection to isolate prey proteins encoded by CC members of an adipocyte cDNA library. The proteins are designated SID CC [RTM] (selected interacting domains) proteins. Also included are a coplymucleotide encoding a polypeptide in the adipocyte cells, a CC recombinant host cell expressing at least one of the interacting cells, a SID (RTM)) polypeptide comprising any of the 738 amino acid sequences given in the specification (including its fragment or variant), a SID (RTM) polypucleotide comprising any of the 738 nucleotide sequences given in the specification (including its fragment or variant), a vector comprising the SID (RTM) polynucleotide, a recombinant host cell comprising the SID (RTM) polynucleotide, a recombinant host cell comprising the specification (including its fragment or variant), a vector comprising the vector, a protein chip comprising the polypeptides and a recombinant host cell comprising the specification. CC The comprising all or part of the data, listed in the specification. CC The comprising metabolic disorders such as obesity or diabetes. CC particularly useful for identifying selected interacting domains (SID CC (prey) protein of the invention

CC (prey) protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; prey; adipocyte; SID; selected interacting do: antidiabetic; protein-protein interaction; diabetes; yeast 2-hybrid assay; metabolic disorder; obesity.

A CDNA library was prepd. from human glioma cell line U-343 MGa 31L or AGI518 human foreskin fibroblasts. Degenerate primers based on conserved regions of PTPs were prepd. Sense oligos were AAQB5926 and AAQB5927, and the antisense oligo was AAQB5928. Three clones defined novel PTP sequences. Two of these were named PTPL1 and GLM-2. The U-343 MGa 31L

RESULT 1 US-08-596-291-3

Sequence 3, Patent No.

Application US/08596291

GENERAL INFORMATION:

APPLICANT: GONEZ, LEONEL JORGE

APPLICANT: SALAS, JAN

APPLICANT: CLAESSON-WELSH, LENA

APPLICANT: HELDIN, CARL-HENRIK

TITLE OF INVENTION: PRIMARY STRUCTURE AND FUNCTIONAL

TITLE OF INVENTION: TYROSINE PHOSPHATASES

NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSE: MOLF. GERENVIELD & SACKS, P.C.
STREET: 600 ATLANTIC AVENUE
CITY: BOSTON
STATE: MASSACHUSETTS
COUNTRY: USA
ZIF: 00210
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compactible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOPTWARE: PATCHION DATA:
APPLICATION NUMBER: US/08/596,291
FILING DATE: 09-ANG-1996
CLASSIFICATION NUMBER: US/08/15,573
FILING DATE: 01-SEP-1993
ATTORNEY/AGENT INFORMATION:
APPLICATION NUMBER: US/08/15,573
FILING DATE: 01-SEP-1993
ATTORNEY/AGENT INFORMATION:
APPLICATION NUMBER: 1.0461/7000
TELEPRAX: 617/720-3441
TELEPRAX: 617/720-3441
TELEPRAX: 92-1742 TELENGE:
INFORMATION FOR SEQ ID NO.
SEQUENCE CHARACTERISTICS:
LENGTH: 2465 amino acids
TYPE: amino acid
TOPOLOGY: linear
MOLECULE TYPE: protein
US-08-596-291-3

Ouery Match
Best Local Similarity 37.8%; Pred. No. 1.6e-53;

US-09-848-294-2

; Sequence 2, Application US/09848294

; Patent No. 6479640

; GENERAL INFORMATION:

APPLICANT: Tonks, Nicholas K.

TITLE OF INVENTION: Isolation of A cDNA Encoding A No. 6479640el

TITLE OF INVENTION: Protein Tyrosine Phosphotase Which Localizes to F

TITLE OF INVENTION: Adhesions and Uses Therefor

FILE REFERENCE: CSHL90-04FZA

; CURRENT FAPLICATION NUMBER: US/09/848,294

; CURRENT FILING DATE: 1999-01-22

; PRIOR APPLICATION NUMBER: 08/759,536

; PRIOR APPLICATION NUMBER: 08/759,536

; PRIOR APPLICATION NUMBER: 08/107,420

; PRIOR FILING DATE: 1996-12-04

; PRIOR FILING DATE: 1996-12-05

; PRIOR RILING DATE: 1995-08-16

; PRIOR FILING DATE: 1996-12-06

; PRIOR FILING DATE: 1995-08-16
